Pipeline Hot Plugs was founded in 2000 and combines 100+ years of oil industry-related experience. We have designed a solid business model and products geared to meet the demand of the oilfield industry. Our business operates seven days a week where any size order is handled by the **Red Pail Team.**

The product consists of a mud kit in a convenient pail that is safe and environmentally friendly. Pipeline Hot Plug kits combine all of the necessary components to plug off lazy gas in plant piping and pipelines so that they can be serviced, repaired or tied in with new configurations. Additionally, each kit contains an information sheet, safety materials for mixing, as well as rags to clean up with at the end.

Clean, safe and easy to use!

Over the years, the company has improved its kits based on our customers feedback, enabling it to better serve the needs of the industry. Following that model, Pipeline Hot Plugs now diligently delivers efficiently, convenient and user-friendly kits.

The following are some of the comments and feedback received from the company's clients and users:

- * Easy to use with no down time
- * Bulletproof kit with everything to complete the job at hand
- * Environmentally friendly and no mess left behind
- * Easy to store in job trailers and service trucks
- * Pipeline Hot Plug kits are designed to deal with lazy gas safely and very cost effectively
- * These kits are a must for every facility and pipeline project
- * They will save you costly crew and time delays
- * This kit is very useful because everything comes in one container, eliminating the need to search for what you need
- * Pipeline Hot Plugs goes the extra mile to make sure that when we need the product, it is available
